

How to upgrade FYM to a new Version

This document explains how to upgrade FYM from the previous Version (including from a Beta Version).

It assumes that you know how to perform some basic computer operations e.g. copy, paste and extract files from a zip archive. If you are not sure how to do these then you should consult the relevant documentation for your version of Windows.

The FYM code files can be obtained only from the www.fymanager.co.uk then follow the 'downloads' link.

1. Download the zip archive – either FYMExe.zip for the latest release or FYManagerBeta.zip for the latest Beta.
2. Open the folder on your PC where this file has been downloaded to.
3. Copy this file and paste it into FYM's <ROOT> folder.
4. Extract all the files from the zip archive to <ROOT> (use the option 'Extract here')
5. If prompted choose the option to Overwrite any files with the same name as those being extracted.

Optional

6. Delete the zip archive from <ROOT>
7. Delete the zip archive from your 'Downloads' folder.
